

Samling:	Applied Physics — D. Volkov Research Materials (2003–2010)
Dokument:	Fil 7 / File 7 [sista i serien · final in series]
Digitaliserat:	2024-03-12 · Stanford Libraries Digital Services
Status:	Ej publicerat · Begränsat tillträde · Restricted Access
Anmärkning:	Delvis svårläst original. Transkription ej utförd.

DATUM & URSPRUNG

D. Volkov — Applied Physics Lab, Stanford University

Notebook Series 7 · Final volume · Jan-Apr 2010

Transcribed from original handwritten notes.

[Note: original increasingly difficult to read from approximately p. 34 onwards]

INLEDANDE ANTECKNINGAR (SIDA 1–3)

The mathematics is sound. I have checked it twice. The geometry does not occur in nature — but that is not evidence against it. It is evidence that it was made.

The apparatus described in the 1940 documentation operated at a narrow resonance band. I have triangulated this to approximately 247 Hz based on the material properties described. The frequency was not incidental. It was the point.

Biological tissue responds. This is not speculation. The data exists.
Ho will not look at it. Nguyen has stopped returning my messages.

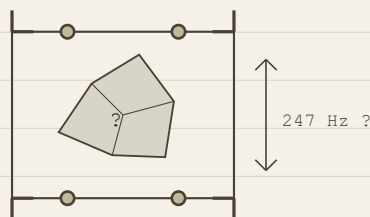

SKISS — APPARATEN (SIDA 17)

Fig. 1 — Rekonstruktion av apparaten. Geometri ej möjlig i naturlig kristall.
[Volkovs anteckning: 'Någon tillverkade detta. Det finns ännu ett.']

MATEMATISKA ANTECKNINGAR (SIDA 22-31)

Coupled oscillatory state: $Q(f) = f_0 / \Delta f$

For synthetic lattice geometry G7: $f_0 \approx 247.3 \pm 0.8$ Hz

Q-factor exceeds 10^4 — not possible in natural mineral structures.

Neural coupling coefficient (estimated, extrapolated from tissue data):

$\kappa = 0.0034 \cdot A \cdot \sin(2\pi ft)$ where A = amplitude at source

Effect radius $r \approx 4.2$ m at A=1 [increases nonlinearly with fragment count]

[marginalanteckning, svårläst:] 'vid fullständig assembly — okänd räckvidd'

HISTORISK DOKUMENTATION — PENNSYLVANIA 1940 (SIDA 38)

"Original apparatus: Pennsylvania, August 1940.

Confirmed functional. Fragments dispersed post-crash."

Cross-reference: CAB Report 40-19 (Penn Central Airlines, Lovettsville VA).

Senator Lundeen. Briefcase not recovered. See also: Harriet Johnson correspondence, Stanford Hoover Archives Box 147 [RESTRICTED to 2045].

SISTA ANTECKNING — ANNAT BLÄCK, TILLAGD SENARE (SIDA 44)

"De tre männen har ett fragment. Frankfurt Clinic, 1951-.

De vet inte vad de bär."

[Antecknat med mörkare bläck. Datering osäker — troligen efter april 2010.]
